

ISIF VISION STATEMENT

The International Society of Information Fusion (ISIF) is the premier professional society and global information resource for multidisciplinary approaches for theoretical and applied INFORMATION FUSION technologies. Technical areas of interest include target tracking, detection theory, applications for information fusion methods, image fusion, fusion systems architectures and management issues, classification, learning, data mining, Bayesian and reasoning methods.

ISIF Journal of Advances in Information Fusion (JAIF)

The Journal of Advances in Information Fusion (JAIF) is the flagship journal of ISIF. JAIF is an open-access, peer-reviewed, semi-annual, archival journal published electronically and distributed via the internet. JAIF was founded in July 2006. The journal is indexed at SCOPUS, free for authors, and freely available for readers at <http://www.isif.org/journal>. Authors are invited to submit both regular papers as well as short correspondences describing advances, applications, and new ideas in information fusion, both theory and application. Authors of papers presented at our annual International Conference on Information Fusion are strongly encouraged to consider submitting expanded versions of their papers to JAIF. Manuscripts can be submitted at <http://jaif.msubmit.net>.
